Good Morning.

Excel is providing full-scope architectural and engineering design services to Upstate Niagara for a proposed expansion of their existing culture facility at the property noted in the subject line of this email. Please provide the following information:

- Utility as-built plans/record drawings, or other best information for the water distribution system that serves this property.
- The most current water pressure and fire flow data for this system in the area of the subject site.
- Information regarding review and approval/permitting processes for any exterior water service laterals that may be required to serve the proposed expansion.
- Engineering standard specifications/detail drawings the water authority has adopted for connections.

In addition to requesting the above information, I would appreciate it if you could please provide me with the name and contact information of someone in your engineering department that I can reach out to with specific questions concerning water system requirements (i.e. meters, valves, meter vault/pit requirements, backflow prevention requirements, water hardness, etc.).

Thank you in advance for your help. For reference, I have attached a map showing the subject property.
