Hello Mr. McCracken,

I'm a fire officer in the Town of Hamburg (Captain with Scranton Fire Company) and am conducting a comprehensive study of the fire protection delivered by our nine fire companies, with the approval of the Town Fire Chiefs Association. Currently, I'm gathering data on numerous areas of interest, like target hazards, demographic nuances, special occupancies, etc.

Would the ECWA be able to provide any data, whether on a spreadsheet or a graphic format, of the various main diameters and flow rates in the town? Ideally, this would include details right down to the neighborhood hydrants. I realize that this may be a heavy lift if the data isn't already assembled into something accessible, like a map.

I'd be happy to answer any questions you have, and any assistance that ECWA can provide me would be greatly appreciated, whether it's large or small.

Respectfully,

Mark Bernas
